What's New In Email Encryption Client?

Wizard-based interface that offers an intuitive configuration sequence for protecting email addresses Right after the swift installation process, users will be greeted with an initial configuration wizard that enables them to jump straight to the email protection sequence. After providing the preferred email address and defining a new password for the protection client, they will be required to define security answers to predefined questions. One useful feature that the wizard provides is its built-in password strength indicator, which enables users to assess how reliable their new passwords are, via a graphical gauge. The email protection

process ends with a confirmation link sent to the provided email address, which needs to be accessed and this could be frustrating to those who are on the rush. Protect your email addresses with this security application that uses elliptic curve encryption algorithms. After confirming their email address, people can enter the application's settings, by accessing the tray area icon. In there, they will find options for changing the current password, marking newly received messages as private or maintain the opened messages decrypted. Additionally, networking options are provided, which enable one to define a custom proxy server and its corresponding login credentials. For those who convenience is a must, the utility also offers a password remember feature, which ensures that their passwords will be automatically entered for a

custom-defined duration.
