My computer has Windows 7 in it right now, and I have nothing on it. I bought a new computer and planned to use Linux for it, it didn't have an OS on it. I made it use with the bootable USB and chose that Linux was it's operating system. Linux ended up on a black screen with a cursor and a text that said it was the Ubuntu linux version. So I installed that and then just told it to install Ubuntu. So Ubuntu came up and I chose that this was my OS and installed it onto my computer. Now it's finished installing, but I don't think I have an OS. I have Windows 7 still on my laptop, and it still boots straight into Windows 7 when the computer is turned on. I also can't boot into Linux, I have a purple screen. 5ec8ef588b
