Blackmagic Design has a new Apple switch on the market; it claims to be the first line-of-sight switching camera monitor for video production, still photography, and live broadcasting. It is a switcher for all practical purposes, and a model with a number of compelling features. My **iPad Pro** is now two years old. In time, there's no doubt, I'll need something bigger. iOS is very good, but the OS I use it on is stuck. It's a very strong competitor, but it hasn't advanced much. Apple is famously late to develop new hardware, and that's what this review is about. The iPad Pro has all the speed of a PC today, with the usability of an iOS device. It's not without issues (and if I knew it would take so long to get reviewed, I never would have bought it), but at just under $1,000 you can't go wrong . How about the new features and layout? I personally love the new iCloud sync and single-window galleries. But the largest improvement is in the new event makers. The ability to create a calendar from your images and events has long been missing from Lightroom, and for good reason. The SpringBoard's ability to create a calendar event is a much-needed feature, and it works like a charm. I've already created several events, and you can even share them through the SpringBoard. I am especially pleased with the fact that I can import existing Google Calendar events into Lightroom. For some, however, these new features will not be enough reason to upgrade. If you're an existing Lightroom 3 or 4 user and you simply can't fathom Basic, it doesn't bother me. The newly updated tools are plenty of reason to upgrade to Lightroom 5.
