To get the pdf, a customer must make a donation. • Add buttons to the list of downloads on the main page to.Q: R: Make vector of dates I want to convert a vector of dates into a vector that has one date for every day in the vector. Example below: > Dates Dates [1] "2012-01-02" "2012-01-03" I would like to have > Dates [1] "2012-01-02" "2012-01-03" "2012-01-04"... "2012-01-31" I have tried strptime, but I can't seem to find out how to make this conversion. A: You can use as.Date with seq.Date as.Date(seq.Date(as.Date(Dates), by = "day"), format = "%Y-%m-%d") Kinetic analysis of the dehydration of xylitol: conformation, transition states, and solvation effects. The dehydration of

xylitol (1) to furfuryl alcohol (2) was examined in a series of solvents, ranging from polar (methanol) to nonpolar (n-hexane). The kinetics were determined in the presence of a secondary rate-limiting step as is the case with most experimental systems. Several attempts to capture a triplet state intermediate were made, but were not as successful as in a previous study for acetic acid. However, it was possible to capture a partially caged, enantiodetermining transition state. The rate-limiting step for dehydration was the nucleophilic attack of the carbinol oxygen on the aldehyde carbon of the alpha,beta-unsaturated keto-aldehyde. This was found to be a slower concerted process, and the mechanism, hence rate of reaction, was found to be sensitive to the dielectric constant of the solvent. These results are consistent with a solvent (trans)-orientation of the alcohol group of 2 in the transition state. Solvation also had a significant effect on the equilibrium constant for dehydration.

Letter: Enough of the Trump antics
