Lightroom 5 is a welcome addition to any photographer's work flow. It has rocked my world, but we will have to wait to see how it resolves the issues that I have mentioned. The performance is a definite plus point. As well, Zooming has potential to become a quite useful tool, perhaps even a replacement for Acroread or iBooks that keep cropping up in my workflow over the years. I am yet to fully appreciate the 30-second connect feature. I am also amazed by how I find 50 DNG files listed in the Lightroom catalogue even though I have not imported them there. The development in Lightroom, in all honesty, is still slow. It feels like a slow development of another application that I once used, where some extra features were added over the years, only to force me to move on. Needless to say, I am a bit wary of the fact that Lightroom 5 is a beta version, and that I may have some software glitches in the next couple of weeks when the final version of the product comes out. As has been reported elsewhere in the review, the new HDR and VR options are not presently solving real problems. The "Radial Blur"

tool still doesn't work for me. The "Add Missing SR suffers from banding issues. For HDR, I might use View Merge, but I am not sure whether to generate a new HDR from our captures or use ViewMerge to merge our three captures into a single HDR. Since I am mostly interested in post-production, I have not enabled HDR on the D800. Photo management software has hit a bit of a snag. With software like Lightroom, we get a level of customization that no other type of software really offers. The function of a good photo editing software is to be able to manipulate all types of images efficiently, and it doesn't have to be very complex in that process. It must also be able to handle all sorts of image collections, developed with different image-types. Lightroom definitely excels in these categories. Unfortunately for me, it is not suited for the whole range of tasks that I use a photo editing software for.

Adobe recently made a big move, and that'll affect Photographers who use software from the company. In January 2019, the company is expected to announce the end of its service agreement for Photoshop and Fireworks. In its place, the company expects to offer a subscription-based service called Creative Cloud. Adobe will also be adding offline access features to the service, which will enable users to access libraries without online access. The company will eventually also provide the ability to move files from one service to another. We're getting some footage of what high-speed editing looks like in the soon-to-be-released Adobe Premier Pro 2021. Lots of footage in Premiere Pro is stored in the form of libraries. Good thing: All of this footage is applied to the timeline based on where it lives on the hard drive. No more fumbling through long folders looking for the right clip. Just jump from reel to reel, without having to learn a new software application. You may have already heard Adobe revising

its strategy; an internal email suggests that the software company is having trouble reaching profitability on its Creative Cloud subscriptions. But there are plenty of advantages to Photoshop's subscription, with no instances of the monthly price tag jumping over $400 a year. (Ask for a free trial.) The options for pro video editors and photographers can be overwhelming. Photoshop makes a lot of the coolest digital image, video, and design work accessible. Now you can get even more Creative Cloud for Photoshop.
